

AMENDMENTS TO THE SPECIFICATION:

Amend Paragraph 0056 of the published application as follows:

The method of the present invention contemplates a frequency of light treatment that is consistent with the frequency and intensity of the individual's exposure to the sun or other source of dangerous radiation. For example, a user may apply the pulsed light energy daily where the individual has daily sun exposure. Where the individual goes outdoors only once a week (for example, to shop), the user may apply the pulsed light energy weekly. Thus, in accordance with the present invention, electromagnetic radiation is applied more frequently to a skin surface with increasing frequency or intensity of exposure of the skin surface to the sun or other source of dangerous radiation.
